# These are the voyages of the Starship Enterprise

Shield effectiveness has been reduced by twelve percent. We have covered the area in a spherical pattern in a ship without contact. Stellar flares are increasing in magnitude and frequency.

## **Indications of human life forms below the planet's surface**

These are the voyages of the Starship Enterprise. Its continuing mission, to explore strange new worlds, to seek out new life and new civilizations, to boldly go where no one has gone before. We need to neutralize the homing signal. Each unit has total environmental control, gravity, temperature, atmosphere, light, in a protective field. Sensors show energy readings in your area. We had a forced chamber explosion in the resonator coil.

Shields up. I recommend we transfer power to phasers and arm the photon torpedoes. Something strange on the detector circuit. The weapons must have disrupted our communicators. You saw something as tasty as meat, but inorganically materialized out of patterns used by our transporters.

We're acquainted with the wormhole phenomenon. This is a remarkable piece of bio-electronic engineering by which I see much of the EM spectrum ranging from heat and infrared through radio waves. Deflector power at maximum. Warp reactor core primary coolant failure. Fluctuate phaser resonance frequencies.

Recommend we adjust shield harmonics to the upper EM band when proceeding. These appear to be some kind of power-wave-guide conduits which allow them to work collectively as they perform ship functions.

Communication is not possible. The shuttle has no power. We are going to Starbase Montgomery for Engineering consultations prompted by minor read-out anomalies. Probes have recorded unusual levels of geological activity in all five planetary systems. Would these scans detect artificial transmissions as well as natural signals?

## **The futility of resistance**

We're acquainted with the wormhole phenomenon, but this... is a remarkable piece of bio-electronic engineering by which I see much of the EM spectrum ranging from heat and infrared through radio waves, et cetera, and forgive me if I've said and listened to this a thousand times. This planet's interior heat provides an abundance of geothermal energy. We need to neutralize the homing signal.

Sensors indicate human life forms 30 meters below the planet's surface. Stellar flares are increasing in magnitude and frequency. Set course for Rhomboid Dronegar 006, warp seven. There's no evidence of an advanced communication network. Total guidance system failure, with less than 24 hours' reserve power. Shield effectiveness has been reduced 12 percent. We have covered the area in a spherical pattern which a ship without warp drive could cross in the given time. Nervous system has been invaded by an unknown microorganism.
